## EXECUTIVE SUMMARY

In February 2015, CPMI-IOSCO issued its final report on Quantitative Disclosure Standards for Central Counterparties (“CCPs”), which provides specific quantitative disclosure requirements for CCPs relative to a number of the PFMI principles. These disclosures are intended to complement the narrative disclosures included in the CPMI-IOSCO Disclosure Framework\*. This document contains the quantitative disclosures for the two divisions of the Fixed Income Clearing Corporation (“FICC”) — the Government Securities Division (“GSD”) and Mortgage-Backed Securities Division (“MBSD”) — and the National Securities Clearing Corporation (“NSCC”). FICC and NSCC are wholly owned subsidiaries of The Depository Trust & Clearing Corporation (“DTCC”).

The attached disclosures include, in addition to those required by CPMI-IOSCO, some supplemental disclosures as proposed by the Payments Risk Committee’s Recommendations for Supporting Clearing Member Due Diligence of Central Counterparties (Feb 2013).

The information provided in this disclosure is reported as of the dates specified. For further information, please contact **CPMI-IOSCO\_Quant@dtcc.com**.

\* The Disclosure Frameworks for FICC and NSCC can be found at **www.dtcc.com**

## Q2 2023 SUPPLEMENTAL EXPLANATORY NOTE

### **Management Note**

The U.S. equity markets rose during the second quarter of 2023, with the S&P 500 index increasing by 8.7% in the quarter, as the bulk of the gains observed in June was driven by favorable inflation data and a pause to interest rate hikes by the Federal Reserve.

The yields on 10-year U.S. treasuries during the second quarter of 2023 peaked at 3.85% following US debt ceiling crisis and strong employment numbers. The 2-year and 10-year U.S. Treasury curve remained inverted since July 5th, 2022, with the negative spread between the two, exceeding 1% in late June 2023.

GSD, MBSD, and NSCC did not experience a default event nor did any Member fail to satisfy payment obligations in Q2 2023.

### **Clearing Fund Backtesting Results**

At FICC and NSCC, backtesting is conducted to measure the sufficiency of the overall Clearing Fund coverage. More specifically, the backtests compare the Clearing Fund requirements with actual price changes in a portfolio. The portfolio values are calculated by using the actual positions in a Member's portfolio and the observed security price changes over the simulated liquidation period of three days. The results are aggregated into the CCP-level backtesting coverage data that is provided in this disclosure. The backtesting methodology assesses the adequacy of a 3-day liquidation period assumption for a simulated Member default, and the FICC and NSCC VaR models are currently calibrated at a minimum of 99% coverage.

A deficiency is identified when the simulated backtesting (default liquidation) losses are greater than the margin or clearing fund resource collected from a member. We conduct simulated backtests for every portfolio daily, calculate the amount of each deficiency and calculate the ratio to determine coverage (99% target for rolling twelve months).

#### **FICC-Government Securities Division (GSD)**

At the end of the second quarter of 2023, GSD's 12-month backtesting coverage level was 99.1%. The 1-month coverage ratio at GSD was 99.96% for April, 99.9% for May, and 99.9% for June. The 12-month backtesting coverage improved to above the 99% target over the 12-month rolling period ending in June as backtesting deficiencies from June 2022 rolled off the lookback period. The largest deficiency for the quarter totaled \$5.5MM, which was observed on 06/28/2023. The median backtesting deficiency for the quarter was \$1.8MM.

#### **FICC-Mortgage-Backed Securities Division (MBSD)**

At the end of the second quarter of 2023, MBSD's 12-month backtesting coverage level was 98.9%. The 1-month coverage ratio at MBSD was 99.9% for April, 100% for May, and 100% for June. The 12-month backtesting coverage remained below 99% primarily due to backtesting deficiencies from November 2022. There was a single deficiency for the quarter for \$150K, which was observed on 04/13/2023.

#### **National Securities Clearing Corporation (NSCC)**

At the end of the second quarter of 2023, NSCC's 12-month backtesting coverage level was 99.8%. The 1-month coverage ratio was at 99.7% for April, and 99.8% for May and June. The median backtesting deficiency for the quarter was \$1.8MM. The largest deficiency for the quarter was \$26.6MM, which was observed on 05/24/2023.

## Q2 2023 SUPPLEMENTAL EXPLANATORY NOTE (Cont'd)

### Liquidity Results

There were no simulated default liquidity sufficiency shortfalls observed in Q2 2023.

For GSD and MBSD, the values are estimated liquidity obligations, post netting that are based on trades that are due to settle the following business day. For NSCC, the values are estimated liquidity obligations that are based on multi-day obligations throughout the (T+2) settlement cycle plus the Long Allocation and CALM offsets. The total reflects, where relevant, intraday and multiday payment obligations that could be caused by the default of any single participant and its affiliates (including transactions cleared for indirect participants) in extreme but plausible market conditions.

The liquidity results reflect NSCC's potential liquidity obligations in a Member default scenario. In a non-default scenario, NSCC's Members have cash obligations for all securities deliveries (buy positions). Those cash obligations are netted with cash received for all securities deliveries (sell positions). If a portfolio is balanced with buys/sells, these settlement amounts will largely offset.

In a default scenario, NSCC is responsible for the receipt of securities from, and payment of cash to, the contra side Members (buy positions). This represents the exposure that is published in this report. NSCC may also need to source securities that the defaulting Member was unable to deliver (sell positions). The liquidity obligations of the sell positions pair-off, as NSCC would exchange settlement proceeds between the two contra side Members. As such, the buy positions drive the potential default liquidity risk that is posed to NSCC, since NSCC would be responsible for the payment of cash required to settle those purchases. Therefore, NSCC's conservative liquidity results derived from a default scenario are not comparable to the non-default settlement obligations of its Members.

Liquidity results also reflect the fact that NSCC receives option activity from the Options Clearing Corporation ("OCC") each business day, but activity on non-expiry dates is not as significant as the activity observed around standard expiration periods. Liquidity needs are conservatively calculated and liquidity resources are measured assuming the guarantee for OCC options has been transferred to NSCC. Liquidity risk measurement is calibrated extremely conservatively to address uncertainty of potential outcomes; resources are likely to increase during periods of stress over a 4-day default period, but no such increases are taken into account as potential risk mitigation.

NSCC uses the Supplemental Liquidity Deposit ("SLD"), a payment obligation, determined by whether the projected or actual daily liquidity need on a business day exceeds the sum of NSCC's qualifying liquid resources ("QLR") available to NSCC, after the application of a wide-range of stressed market assumptions. The SLD payment obligation is based on the calculated QLR and projected or actual liquidity exposure over the upcoming settlement cycle that a Member's daily activity would pose to NSCC on that particular day in the event of that Member's default. NSCC collected SLD five times in Q2. SLD is part of NSCC's diversified set of liquidity resources; QLR includes cash deposits to the NSCC Clearing Fund; proceeds of the issuance and private placement of (a) short-term, unsecured notes in the form of commercial paper and extendable notes and (b) term debt; and cash that would be obtained by drawing on NSCC's committed 364-day credit facility with a consortium of banks. The SLD rule is Rule 4A in the NSCC rulebook that can be accessed via [https://www.dtcc.com/~media/Files/Downloads/legal/rules/nscc\\_rules.pdf](https://www.dtcc.com/~media/Files/Downloads/legal/rules/nscc_rules.pdf). Full text of the SLD filings may be obtained by visiting the DTCC website at [www.dtcc.com/legal/sec-rule-filings](http://www.dtcc.com/legal/sec-rule-filings).

Disclosure Reference	Disclosure Description	Frequency	Data Type	FICC		NSCC	Explanatory Notes
				GSD	MBSD		
<b>Disclosure 4.1 - Total value of default resources (excluding initial and retained variation margin), split by clearing service if default funds are segregated by clearing service</b>							
4.1.1	Prefunded - Own Capital Before	Quarterly/ Quarter End	USD \$MM	<b>78</b>		<b>114</b>	The Company maintains an amount referred to as the corporate contribution, to be applied to losses of the Company as provided in the clearing agency rules. The amount of the corporate contribution is generally equal to 50% of the Company's general business risk capital requirement.
4.1.2	Prefunded - Own Capital Alongside		USD \$MM	N/A	N/A	N/A	
4.1.3	Prefunded - Own Capital After		USD \$MM	N/A	N/A	N/A	
4.1.4	Prefunded - Aggregate Participant Contributions - Required		USD \$MM	<b>39,052</b>	<b>10,280</b>	<b>8,601</b>	NSCC and each FICC Division calculates and collects Clearing Fund from its Members using a risk-based margin methodology. These amounts (a Member's "Required Fund Deposit") operate as the Member's margin, and the aggregate of all such Members' deposits is, collectively, the Clearing Fund, which operates as NSCC's/FICC (with respect to each division's) default fund.  For NSCC, on September 5, 2017, the US cash equities markets moved to a T+2 settlement cycle. Accordingly, after that date, the clearing fund has been calculated to take into account the shortened settlement cycle.

<b>Disclosure 17.1 - Operational availability target for the core system(s) involved in clearing (whether or not outsourced) over specified period for the system</b>								
17.1.1	Operational availability target for the core system(s) involved in clearing (whether or not outsourced) over specified period for the system	Quarterly	Percentage	99.6%	99.6%	99.6%	This target and the actual results below are calculated at the individual product-line level and then averaged across all of the systems identified below, in accordance with the established calculation for the applicable SLA.	
<b>Disclosure 17.2 - Actual availability of the core system(s) over the previous twelve month period</b>								
17.2.1	Actual availability of the core system(s) over the previous twelve month period	Quarterly	Percentage	99.9%	99.9%	99.7%	Availability is calculated across multiple systems. Specifically, CMU, CNS, NSCC Risk Management, FICC Risk Management, GSD, MBSD and Trade Capture.	
<b>Disclosure 17.3 - Total number of failures</b>								
17.3.1	Total number of failures and duration affecting the core system(s) involved in clearing over the previous twelve month period (Duration of Failure)	Quarterly	Count / hh:mm:ss	8 / 12:54:00		Regulation Systems Compliance and Integrity (Regulation SCI) events for NSCC, GSD, and MBSD over the previous twelve month period are reviewed for Disclosure 17.3 reporting. Regulation SCI events that impact core systems used in clearing that enable the acceptance and novation of trades, and enable the calculation of margin and settlement obligations are assessed by Risk Management, Product Management, Regulation SCI personnel, and Legal to confirm total number of incidents and duration of failures. Incidents that do not result in a direct business impact to clients are not reported as a failure for Disclosure 17.3. In Q2 2023, there were three instances where Clearing Fund Letters breached the SLA, two times within NSCC for 18 minutes and 13 minutes and one time within GSD for 52 minutes. During Q1 2023, processing issues were encountered on DTCC's mainframe impacting ATP and other systems for 4 hours and 34 minutes. In Q4 2022, on two separate occasions, Clearing Fund Letters were regenerated after the client delivery SLA time by 2 hours and 10 minutes and then 8 minutes. In another instance, a network disruption caused the delay of settling bank acknowledgement by 1 hour and 54 minutes. Manual processing caused the unavailability of intraday VaR calculations for 2 hours and 45 minutes.		
<b>Disclosure 17.4 - Recovery time objective(s)</b>								
17.4.1	Recovery time objective(s) (e.g. within two hours)	Quarterly	Time	Within 2 Hours	Within 2 Hours	Within 2 Hours	Recovery time objective is within 2 hours.

<b>Payment Risk Committee Disclosure 2 - Initial Margin Detail</b>							
Initial Margin Breakdown by Component	VaR / Volatility	Quarterly/ Quarter End	USD \$MM	<b>31,640</b>	<b>8,051</b>	<b>5,051</b>	The Value-at-Risk (VaR) and Volatility components are based on the potential price fluctuations of unsettled positions.  With the implementation of SVaR for FICC, Margin Proxy is now used as a backup VaR methodology in the event of a significant vendor data disruption.
	Coverage Component (CC)		USD \$MM	N/A	N/A	<b>19</b>	The Coverage Component is a back-test-like component that is meant to address potential model deficiencies. The Coverage Component is designed by NSCC to mitigate the risks associated with a Member's Required Deposit being insufficient to cover projected liquidation losses to the Coverage Target by adjusting a Member's Required Deposit towards the Coverage Target.
	Margin Liquidity Deposit (MLA)		USD \$MM	<b>995</b>	<b>348</b>	<b>361</b>	The Margin Liquidity Adjustment Charge (MLA), addresses the risk presented to the Clearing Corp when a Member's portfolio contains large Net Unsettled Positions in the particular group of securities with a similar risk profile or in a particular asset type.
	Blackout Period Exposure Adjustment		USD \$MM	<b>21</b>	N/A	N/A	Blackout Period Exposure: Refers to the exposure to GSD and Reverse Repo participants of the potential overvaluation of MBS Collateral in GCF Repos during the Blackout Period. An adjustment to Clearing Fund Requirements (increase to Repo participants and decrease to Reverse Repo participants) is made based on MBS positions in Member's GCF portfolios during the Blackout Period. The adjustment is based on the average realized pay-down rate transactions. The adjustment is made during the Blackout Period, the first 5 to 7 business days each month.
	CME Cross Margin		USD \$MM	<b>-76</b>	N/A	N/A	GSD has a cross-margining arrangement with the Chicago Mercantile Exchange. The amount represents the aggregate margin savings for common members who elect to participate in the cross-margining arrangement.
	Margin Req. Differential (MRD)		USD \$MM	N/A	N/A	<b>1,882</b>	The NSCC MRD is designed to address position-variability risk by estimating the shortfall of end-of-day VaR and mark-to-market compared with the next day's intraday risk and the risk that the next margin call will not be satisfied.
	Mark-to-Market (MtM)		USD \$MM	N/A	<b>0</b>	<b>185</b>	As a cash market CCP, NSCC uses a continuous net system where securities within the settlement system are marked daily to the prior night's closing price. Net portfolio debits per Member are collected as part of the Member's Required Deposit; net portfolio credits are not included. Value also includes 'When Issues MtM'. In FICC, GSD and MBSD maintain a pass-through MtM process whereby it collects MTM debits from those Members with debits and passes those to the Members with MTM credits.
	Special Charge		USD \$MM	<b>6,473</b>	<b>1,876</b>	<b>228</b>	GSD includes: Back Test Charges, Intraday Supp. Fund Deposit, Minimum Deposit, and Special Charges MBSD includes: Back Test Charges, Intraday MTM Charges, Intraday VaR Charges, Adequate Assurance, and Special Charges NSCC includes: Back Test Charges, Adequate Assurance, Intraday Mark-to-Market Charge, and Intraday VaR Charge.
	Other Charges		USD \$MM	<b>0</b>	<b>4</b>	<b>875</b>	GSD includes: Minimum Requirement Adjustments, Excess Capital Premium, and Falling Below Minimum Requirement MBSD includes: 6 Day Fails Interest, Excess Capital Premium, Falling Below Minimum Requirement, and Minimum Requirement Adjustments NSCC includes: Family Issued Securities, CNS Fails, Non-CNS Requirements, CF Premium, and Minimum Requirement Adjustments
