

TOP 3 MYTHS ABOUT ROBOTICS

1
Robotics is a jobs-killer

FACT: Robotics can increase employee and organizational bandwidth

Experience shows employee satisfaction rises when RPA is implemented, with new freedom from rote tasks and more time to focus on higher-value, more creative analysis and troubleshooting. Also, the entire organization benefits from gaining bandwidth.

2
FACT: Robotics combined with AI can be used strategically

Many firms are seizing the opportunity to leverage recent advances in cognitive technology and data mining to expand their databases' data capture and self-learning capabilities, to automate data sourcing, boost the number of data points, and streamline clients' data sharing and collection.

Robotics can only be used tactically in business, to automate simple, repetitive tasks.

3
Robotics introduces unmanageable risks to an organization's data and security

FACT: Robotics applications, when properly programmed, can mitigate risk

Unlike with humans performing the same tasks, we can impose even stricter controls and permissions on the activities of robotic users, thereby improving an organization's risk profile.
