Attention:	Operations Managers/Cashiers/Officers
Subject:	Participant Browser Service (PBS) – Dynamic Ticket Printing

Leveraging DTCC's current Participant Browser Service (PBS), Dynamic Ticket printing provides quality web-based printing technology allowing for a more robust and intuitive way of receiving printed tickets and *will be the standard way firms receive tickets in the future.*

After a successful pilot program in 2008, The PBS Dynamic Ticket Printing application was released during the 4th Quarter of 2008. Dynamic Ticket printing has assisted participants in replacing antiquated dedicated PTS printers and helped eliminate the need for a SNA gateway connection firms have used for printing.

Significant Cost Savings
- Eliminate the dedicated PTS Printer and the cost associated with repairs.
- Less paper overall – clean up unwanted tickets currently being received.

Benefits
- Supports the elimination of the SNA gateway
- Provides the ability to send DTC PTS print tickets generated on dedicated printers to printers configured on the user PC network.
- Provides configuration capability where user can assign different print destination tickets to specific printers and assign print preferences like number of copies and landscaping print.
- Allows the user the ability to track the status of print tickets.

System Requirements
- Access to DTCC's PBS service
- Allow Java Applet download on users PC
- Internet Explorer, version 6.0 or higher
- Java Plug-in, version 1.5.0 or higher
- Local/Network PC printers configured to your PC

Note: A separate entitlement will need to be requested by your Access Coordinator to add the SMXD function to the users profile.

We have assembled a highly skilled team that is ready to assist you in meeting this new standard. If you have any questions or would like to get started using this new technology, please contact Joseph Winkhart, PBS Product Manager at 212-855-4178 or jwinkhart@dtcc.com.

Visit www.dtcc.com/pbs to learn more about PBS and all of the enhanced capabilities available.
