To mitigate risk, the legal and compliance groups of broker/dealers mandate that a separate paper confirmation listing broker-specific disclosure information be distributed to counterparties in addition to the electronic confirmation. Confirmation disclosures are intended to protect broker/dealers in the event of a dispute between counterparties. Recipients of these supplementary confirmation disclosures often pay a third party to store the documents offsite. The result is an enormous cost to the industry for processing, distributing and storing these documents.

Through ongoing participation with the Securities Industry and Financial Markets Association (SIFMA), Omgeo learned of the costs affecting industry participants and the disclosure requirement issues surrounding Rule 10b-10. Given Omgeo’s role facilitating electronic trade confirmation processing, it was a logical step to leverage the TradeSuite ID™ confirm in an effort to address this industry pain point.

Omgeo worked closely with SIFMA to identify a solution that would satisfy the operational, compliance and legal requirements of market participants and regulators. The result is our confirmation disclosure service, inSITE.

In November of 2007 Omgeo, along with industry representatives, met with the Securities and Exchange Commission (SEC) regarding this proposed solution. As a result, Omgeo received a “No-Action” letter from the SEC on March 12, 2008. The letter stated that use of the Confirm Disclosure Service would not result in enforcement action, essentially declaring that access to electronic confirmation disclosures equaled delivery from a 10b-10 compliance standpoint.

**BENEFITS**

inSITE benefits not only those parties directly involved, but the industry overall.

Key benefits include:

- Increased efficiency — quick access to economic details along with a URL link to confirm
- Disclosure information puts all details at your fingertips.
- Cost savings — electronic delivery obviates the need for paper mailings, postage and mailroom support personnel.
- Eco-friendly — paper reduction supports ‘green’ initiatives.

**ENRICHMENT CRITERIA**

With the criteria below, broker/dealers are able to use system logic or a user-defined disclosure code to determine which enrichment information will be included on the electronic confirmation.

- TradeSuite ID Broker-Dealer ID #
- Effective Trade Date
- Security Asset Class
- Security Type
- Settlement Location
- User Defined Disclosure Code

When using system logic to enrich the confirmation disclosure, broker/dealers must identify the asset class and settlement location or the individual security type and settlement location. This ensures that submitted TradeSuite ID confirmations are enriched with the correct URL and reference number.

**10B-10 INFORMATION**

As a condition to granting exempt status, the SEC required Omgeo to include further discrete 10b-10 fields (listed below) on the TradeSuite ID confirmation.

- New Values for existing Role Field
- Mark Up / Mark Down
- Current Yield
- Yield to Maturity
- Yield to Call/Redemption
- 3rd Party Remuneration Received Indicator
EFFECT ON PAPER CONFIRMATIONS
As a result of the no-action relief granted by the SEC, access to inSITE replaces the Broker Mailed Elimination Confirmation Agreement (BMECA) between buy-side TradeSuite ID users and broker/dealers subscribed to the service. Though once the rule, paper will be the exception and buy-side parties wishing to receive paper confirmation disclosures will need to contact their broker/dealers directly. Otherwise, broker/dealers subscribed to inSITE will default to electronic enrichment.

SUBSCRIPTION DETAILS
inSITE is a subscription-based service for broker/dealers. Investment managers, custodian banks, and interested parties who currently use TradeSuite ID, a SAS 70 certified solution, do not need an additional subscription to receive the enriched confirmations. While inSITE currently stores confirmation disclosures for TradeSuite ID users, Omgeo continues to explore additional uses for the repository to benefit our global community.
