EXECUTIVE SUMMARY

In February 2015, CPMI-IOSCO issued its final report on Quantitative Disclosure Standards for Central Counterparties (“CCPs”), which provides specific quantitative disclosure requirements for CCPs relative to a number of the PFMI principles. These disclosures are intended to complement the narrative disclosures included in the CPMI-IOSCO Disclosure Framework*. This document contains the quantitative disclosures for the two divisions of the Fixed Income Clearing Corporation (“FICC”) — the Government Securities Division (“GSD”) and Mortgage-Backed Securities Division (“MBSD”) — and the National Securities Clearing Corporation (“NSCC”). FICC and NSCC are wholly owned subsidiaries of The Depository Trust & Clearing Corporation (“DTCC”).

The attached disclosures include, in addition to those required by CPMI-IOSCO, some supplemental disclosures as proposed by the Payments Risk Committee’s Recommendations for Supporting Clearing Member Due Diligence of Central Counterparties (Feb 2013).

The information provided in this disclosure is reported as of the dates specified. For further information, please contact

CPMI-IOSCO_Quant@dtcc.com.

* The Disclosure Frameworks for FICC and NSCC can be found at **www.dtcc.com**

Q2 2022 SUPPLEMENTAL EXPLANATORY NOTE

Management Note

The U.S. equity markets were volatile during the second quarter of 2022 as interest rate and inflation fears persisted, with the S&P 500 index experiencing its worst quarterly decline since Q1 2020 COVID pandemic declines. The Federal Reserve raised interest rates twice by 50 basis points in May and 75 basis points in June and there is uncertainty surrounding the U.S. economy with decades high inflation rates, Fed tightening, and surging commodity prices. However, unemployment figures remain at 50 year lows and jobs reports were stronger than expected. The yields on U.S. treasuries continued increasing throughout the course of the second quarter of 2022. The 10-year U.S. Treasury yield increased from 2.32% at the beginning of the quarter to 2.97% at the quarter end due to inflationary fears and anticipated monetary policy tightening by The Federal Reserve. The U.S. Treasury curve inverted briefly on April 1st, remained flat throughout the quarter and eventually inverted at the beginning of July 2022.

Clearing Fund Backtesting Results

At DTCC, backtesting is conducted to measure the sufficiency of the overall Clearing Fund coverage by comparing a Member's Required Deposit to the 3-day observed P&L for the Member's portfolio and aggregated into the CCP-level backtesting coverage data that is provided in this disclosure. The backtesting assesses the adequacy of a 3-day liquidation period assumption in the event of Member default, and all VaR models at DTCC are currently calibrated at a minimum of 99% coverage.

FICC-Mortgage-Backed Securities Division (MBSD)

At the end of the second quarter of 2022, MBSD's 12-month backtesting coverage level was 99.4%. The 1-month coverage ratio at MBSD was 99.8% for April, 100.0% for May, and 94.2% for June. June backtesting deficiencies occurred at the beginning of the month when the Federal Reserve raised interest rates by 75 basis points, and towards the end of the month amid recessionary pressures. The largest deficiency for the quarter and 12-month period was for \$898.9MM incurred on 06/09/2022. It was driven by a large 3-day downward movement in TBA prices (for reference, the 4.0% 30yr UMBS experienced a 3-day price drop of 3 points + 1 tick and the 4.0% 30yr GNMA II experienced a 3-day price drop of 2 points + 18 ticks). The median backtesting deficiency for the quarter was \$4.6 million.

FICC-Government Securities Division (GSD)

At the end of the second quarter of 2022, GSD's 12-month backtesting coverage level was 98.7%. The 1-month coverage ratio at GSD was 97.7% for April, 99.1% for May, and 94.2% for June. The increased number of the backtesting deficiencies in June resulted in the 12-month backtesting coverage declining to below 99%. The majority of the backtesting deficiencies in June occurred at the beginning of the month when the Federal Reserve raised interest rates by 75 basis points. The largest deficiency for the quarter and 12-month period was for \$995.3MM incurred on 06/09/2022. It was driven by a large 3-day upward movement in US Treasury yields (+62bps at the 2yr, +45bps at the 10yr and +27bps at the 30yr points of the curve). The median backtesting deficiency for the quarter was \$5.6 million.

National Securities Clearing Corporation (NSCC)

At the end of the second quarter of 2022, NSCC's 12-month backtesting coverage level was 99.7%, with the 1-month coverage ratio for April at 99.9%, 99.8% for May, and 99.7% for June. The median backtesting deficiency for the quarter was \$2.4 million. The largest deficiency for the quarter was for \$48.1MM, which was incurred on 06/09/2022, and driven by volatile market conditions surrounding high inflation levels and concerns around monetary policy tightening.

Q2 2022 SUPPLEMENTAL EXPLANATORY NOTE CONT'D

Liquidity Results

GSD/MBSD/NSCC did not experience a default event nor did any Member fail to satisfy payment obligations in Q2 2022.

For GSD and MBSD, the values are estimated liquidity obligations, post netting that are based on trades that are due to settle the following business day. For NSCC, the values are estimated liquidity obligations that are based on multi-day obligations throughout the (T+2) settlement cycle plus the Long Allocation and CALM offsets. The total reflects, where relevant, intraday and multiday payment obligations that could be caused by the default of any single participant and its affiliates (including transactions cleared for indirect participants) in extreme but plausible market conditions.

The liquidity results reflect NSCC's potential liquidity obligations in a Member default scenario. In a non-default scenario, NSCC's Members have cash obligations for all securities deliveries (buy positions). Those cash obligations are netted with cash received for all securities deliveries (sell positions). If a portfolio is balanced with buys/sells, these settlement amounts will largely offset.

In a default scenario, NSCC is responsible for the receipt of securities from, and payment of cash to, the contra side Members (buy positions). This represents the exposure that is published in this report. NSCC may also need to source securities that the defaulting Member was unable to deliver (sell positions). The liquidity obligations of the sell positions pair-off, as NSCC would exchange settlement proceeds between the two contra side Members. As such, the buy positions drive the potential default liquidity risk that is posed to NSCC, since NSCC would be responsible for the payment of cash required to settle those purchases. Therefore, NSCC's conservative liquidity results derived from a default scenario are not comparable to the non-default settlement obligations of its Members.

Liquidity results also reflect the fact that NSCC receives option activity from the Options Clearing Corporation ("OCC") each business day, but activity on non-expiry dates is not as significant as the activity observed around standard expiration periods. Liquidity needs are conservatively calculated and liquidity resources are measured assuming the guarantee for OCC options has been transferred to NSCC. Liquidity risk measurement is calibrated extremely conservatively to address uncertainty of potential outcomes; resources are likely to increase during periods of stress over a 4-day default period, but no such increases are taken into account as potential risk mitigation. NSCC has a diversified set of liquidity resources and uses metrics to assess the implications for sizing NSCC's liquidity resources.

NSCC received regulatory approval of a rule change to collect, when applicable, daily Supplemental Liquidity Deposits ("SLD") to NSCC's Clearing Fund on June 20, 2021 and implemented it on June 23, 2021. An SLD payment obligation is determined if the daily liquidity need on a business day exceeds the sum of NSCC's qualifying liquid resources ("QLR") available to NSCC, after the application of a wide-range of stressed market assumptions.

No shortfall was observed for Q2. The most significant liquidity exposures during the quarter coincided with options expiry dates which continue to have the largest impact on the liquidity profile. The SLD payment obligation is based on the calculated QLR and actual liquidity exposure over the upcoming settlement cycle that a Member's daily activity would pose to NSCC on that particular day in the event of that Member's default. NSCC collected SLD two times in Q2. SLD is part of NSCC's QLR that includes cash deposits to the NSCC Clearing Fund; proceeds of the issuance and private placement of (a) short-term, unsecured notes in the form of commercial paper and extendable notes and (b) term debt; and cash that would be obtained by drawing on NSCC's committed 364-day credit facility with a consortium of banks. With the SLD rule change, NSCC is able to address its liquidity exposure each business day based on Members' settlement activity and limit liquidity shortfalls due to forecasts of upcoming liquidity exposures based on historical activity. The SLD rule is Rule 4A in the NSCC rulebook that can be accessed via https://www.dtcc.com/~media/Files/Downloads/legal/rules/nscc_rules.pdf. Full text of the SLD filings may be obtained by visiting the DTCC website at www.dtcc.com/legal/sec-rule-filings.

The SLD collections during Q2 2022 fully mitigated NSCC liquidity exposure. The modified SLD rule allows intraday cash collections and also start-of-day SLD collections. For risk reporting and alignment to the QLR stress assumptions, any start-of-day SLD collections are reported as QLR shortfalls for that business day and do not account for additional liquidity resources in line with the additional option activity when NSCC assumes the trade guaranty from the OCC.

Disclosure Reference	Disclosure Description		Frequency	Data Type	FICC		NSCC	Explanatory Notes

Disclosure 4.4 - Credit Risk Disclosures - Cont'd								
4.4.8	Number of business days, if any, on which the above amount (4.4.7) exceeded actual pre-funded default resources (in excess of initial margin) and by how much.		Quarterly	Bus. Days	0	0	0	Total number of business days where the largest Cover 2 ratio per day exceeded 100% for the last 12 months of this test period. Excess amounts above pre-funded default resources (in excess of initial margin) corresponding to these business days are referenced below in 4.4.9 explanatory notes.
4.4.9	The amount in 4.4.7 which exceeded actual pre-funded default resources (in excess of initial margin) (Previous 12 Months)	Amt Exceeded/ Previous 12 Months		USD \$MM	0	0	0	
4.4.10	For each clearing service, what was the actual largest aggregate credit exposure (in excess of initial margin) to any two participants and their affiliates	Peak Day/ Previous 12 Months		USD \$MM	1,441	1,435	221	Amount represents Peak/Average VaR model back test results.
		Avg/ Previous 12 Months		USD \$MM	74	287	15	
Disclosure 5.1 - Assets eligible as initial margin, and the respective haircuts applied								
5.1.1	Assets eligible as initial margin and the respective haircuts applied		Update as changes are made	Website/ Hyperlink	http://www.dtcc.com/~media/Files/Downloads/legal/rules/ficc_gov_rules.pdf	http://www.dtcc.com/~media/Files/Downloads/legal/rules/ficc_mbsd_rules.pdf	http://www.dtcc.com/~media/Files/Downloads/legal/rules/nscc_rules.pdf	GSD: Section: “SCHEDULE OF HAIRCUTS FOR ELIGIBLE CLEARING FUND SECURITIES” MBSD: Section: “SCHEDULE OF HAIRCUTS FOR ELIGIBLE CLEARING FUND SECURITIES” NSCC: Section: “PROCEDURE XV”, “III. Collateral Value of Eligible Clearing Fund Securities”
Disclosure 5.2 - Assets Eligible for pre-funded participant contributions to the default resources, and the respective haircuts applied (if different from 5.1)								
5.2.1	Assets Eligible for pre-funded participant contributions to the default resources, and the respective haircuts applied (if different from 5.1)		Update as changes are made		See 5.1	See 5.1	See 5.1	
Disclosure 5.3 - Results of testing of haircuts								
5.3.1	Confidence interval targeted through the calculation of haircuts		Quarterly	Percentage	99%	99%	99%	
5.3.2	Assumed holding/liquidation period for the assets accepted			Bus. Days	3	3	3	See Explanatory Note from 4.4.2
5.3.3	Look-back period used for testing the haircuts				10+ years	10+ years	10+ years	For Treasury and Agencies the lookback period, “10+ years”, starts Jan 1, 2008 and continues to the last day of this quarter tested & reported herewith. Similar to current scenario selection or retention approach, where Historic Stress Scenario Dates are selected from a timespan of more than 10 years (utilizing a fixed start date and extending the end date), or retained for all Historic Scenario Dates previously derived which are on or after Jan 1, 2008. For Mortgages, Historic Stress Scenarios are selected from a 10+ years look-back period starting in 2002 and applied to CUSIPs selected from the 3 months of the quarterly test period.
5.3.4	Number of days during the look-back period on which the fall in value during the assumed holding/liquidation period exceeded the haircut on an asset.			Bus. Days	Treasury total of 12 days. Mortgages total of 62 days. Agency 0 days.	Treasury total of 12 days. Mortgages total of 62 days. Agency 0 days.	Treasury total of 12 days. Mortgages total of 62 days. Agency 0 days.	See 5.1 for list of eligible assets and the respective haircuts applied. For Treasuries, based on the “10 years +” lookback period (including 2008 and onward), 2 days for 20 yrs. and 12 days for 30 yrs. tenors were observed, where a change in rate caused a breach of respective HC. The total day count for Treasuries is 12 (of which 2 days caused a breach for both tenors, 20 & 30 yrs.). For Mortgages there were 62 days in Q2 2022 where at least one breach occurred. In total, the stress return (loss) for 19 CUSIPs under two historic stress scenarios breached the current HC. For Agencies no breaches were observed under current HCs.

6.5.3	Achieved coverage level [aggregate CCP-level backtest coverage]	Previous 12 Months		Percentage	98.7%	99.4%	99.7%	
6.5.4	Where breaches of initial margin coverage (as defined in 6.5(a)) have occurred, report on size of uncovered exposure	Peak Size/ Previous 12 Months		USD \$MM	995	899	161	
6.5.5	Where breaches of initial margin coverage (as defined in 6.5(a)) have occurred, report on size of uncovered exposure	Average Size/ Previous 12 Months		USD \$MM	19	56	13	
Disclosure 6.6 - Average Total Variation Margin Paid to the CCP by participants each business								
6.6.1	Average Total Variation Margin Paid to the CCP by participants each business day	Average	Quarterly	USD \$MM	3,669	4,150	1,719	For GSD and MBSD, VM is a cash pass-through process across the members; for NSCC, VM charges are included as part of the Clearing Fund requirements. MTM debits were aggregated across all members to reflect the variation margin paid to all members.
Disclosure 6.7 - Maximum total variation margin paid to the CCP on any given business day over the period								
6.7.1	Maximum total variation margin paid to the CCP on any given business day over the period	Maximum	Quarterly	USD \$MM	6,687	9,380	7,660	See Explanatory Note from 6.6

Disclosure Reference	Disclosure Description		Frequency	Data Type	FICC		NSCC	Explanatory Notes
					GSD	MBSD		
Disclosure 6.8 - Maximum aggregate initial margin call on any given business day over the period								
6.8.1	Maximum aggregate initial margin call on any given business day over the period	Maximum	Quarterly	USD \$MM	2,143	2,153	8,456	Amount represents the largest aggregate deficit over amounts on deposit. This is the actual call made, to be reduced by any excess collateral that was held. Call amount would be inclusive of any intraday calls made.
Disclosure 7.1 - Liquidity Risk								
7.1.1	State whether the clearing service maintains sufficient liquid resources to 'Cover 1' or 'Cover 2'.		Quarterly/ Quarter End		Cover 1	Cover 1	Cover 1	
7.1.2	Size and composition of qualifying liquid resources for each clearing service; (a) Cash deposited at a central bank of issue of the currency concerned			USD \$MM	10,629	3,171	24,383	
7.1.3	Size and composition of qualifying liquid resources for each clearing service; (b) Cash deposited at other central banks			USD \$MM	0	0	0	
7.1.4	Size and composition of qualifying liquid resources for each clearing service; (c) Secured cash deposited at commercial banks (including reverse repo)	Repo Only		USD \$MM	0	0	0	
7.1.5	Size and composition of qualifying liquid resources for each clearing service; (d) Unsecured cash deposited at commercial banks	Commercial Bank Deposits		USD \$MM	520	145	1,865	
		Money Market Funds		USD \$MM	0	0	0	
		US Treasury Bills		USD \$MM	0	0	0	
7.1.6	Size and composition of qualifying liquid resources for each clearing service; (e) secured committed lines of credit (ie those for which collateral/security will be provided by the CCP if drawn) including committed foreign exchange swaps and committed repos			USD \$MM	86,798	50,619	10,020	For FICC, amount represents the assigned total amount of rules-based facility, Capped Contingency Liquidity Facility ("CCLF") for the reported quarter. For NSCC, the amount represents a secured line of credit with a syndicate of lenders.
7.1.7	Size and composition of qualifying liquid resources for each clearing service; (f) unsecured committed lines of credit (ie which the CCP may draw without providing collateral/security)			USD \$MM	N/A	N/A	N/A	
7.1.8	Size and composition of qualifying liquid resources for each clearing service; (g) highly marketable collateral held in custody and investments that are readily available and convertible into cash with prearranged and highly reliable funding arrangements even in extreme but plausible market conditions			USD \$MM	16,055	5,826	830	Amounts include Clearing Fund securities.
7.1.9	Size and composition of qualifying liquid resources for each clearing service; (h) other			USD \$MM	0	0	0	For GSD and MBSD, the portfolio of a defaulting member comprised of highly marketable collateral would also be available as a liquidity resource. Value and composition of that portfolio would vary by day and by member. At quarter end, GSD observed \$46,146MM and MBSD observed \$226MM in repo value of Underlying Securities. 6/30/22 was not an MBSD class-settlement day. For NSCC, Supplemental Liquidity Deposit ('SLD') program provides for additional rules-based liquidity resources. As of 6/30/22 there were no SLD deposits on hand. Please see Supplemental Note for additional information. Resources reported in Section 7.1 are as of 6/30/22 and do not correspond to the dates of the actual largest obligations.
7.1.10	State whether the CCP has routine access to central bank liquidity or facilities.			N/A	N/A	N/A		
7.1.11	Details regarding the schedule of payments or priority for allocating payments, if such exists, and any applicable rule, policy, procedure, and governance arrangement around such decision making.			N/A	N/A	N/A

Disclosure 17.1 - Operational availability target for the core system(s) involved in clearing (whether or not outsourced) over specified period for the system									
17.1.1	Operational availability target for the core system(s) involved in clearing (whether or not outsourced) over specified period for the system			Quarterly	Percentage	99.6%	99.6%	99.6%	This target and the actual results below are calculated at the individual product-line level and then averaged across all of the systems identified below, in accordance with the established calculation for the applicable SLA.
Disclosure 17.2 - Actual availability of the core system(s) over the previous twelve month period									
17.2.1	Actual availability of the core system(s) over the previous twelve month period		Quarterly	Percentage	99.94%			Availability is calculated across multiple systems. Specifically, CMU, CNS, Risk Management, GSD, MBSD and Trade Capture. Since Risk Management is across FICC and NSCC, actual availability cannot be captured at the individual entity level. Actual availability is across all three in total.	
Disclosure 17.3 - Total number of failures									
17.3.1	Total number of failures and duration affecting the core system(s) involved in clearing over the previous twelve month period (Duration of Failure)		Quarterly	Count / hh:mm:ss	3 / 1:44:00			Regulation Systems Compliance and Integrity (Regulation SCI) events for NSCC, GSD, and MBSD over the previous twelve month period are reviewed for Disclosure 17.3 reporting. Regulation SCI events that impact core systems used in clearing that enable the acceptance and novation of trades, and enable the calculation of margin and settlement obligations are assessed by Risk Management, Product Management, Regulation SCI personnel, and Legal to confirm total number of incidents and duration of failures. Incidents that do not result in a direct business impact to clients are not reported as a failure for Disclosure 17.3. File processing delays caused FICC Clearing Fund Requirements reporting delays to clients on two occasions by 45 minutes and by 40 minutes, but all clearing fund requirements were satisfied within the required collection time. File processing delays resulted in FICC sending an obligation file 19 minutes late to the clearing bank.	
Disclosure 17.4 - Recovery time objective(s)									
17.4.1	Recovery time objective(s) (e.g. within two hours)		Quarterly	Time	Within 2 Hours	Within 2 Hours	Within 2 Hours	Recovery time objective is within 2 hours.

Payment Risk Committee Disclosure 2 - Initial Margin Detail								
	Initial Margin Breakdown by Component	VaR / Volatility	Quarterly/ Quarter End	USD \$MM	18,305	7,120	6,163	<p>The Value-at-Risk (VaR) and Volatility components are based on the potential price fluctuations of unsettled positions.</p> <p>With the implementation of SVaR for FICC, Margin Proxy is now used as a backup VaR methodology in the event of a significant vendor data disruption.</p>
		Coverage Component (CC)		USD \$MM	N/A	N/A	66	<p>The Coverage Component is a back-test-like component that is meant to address potential model deficiencies.</p> <p>The Coverage Component is designed by NSCC to mitigate the risks associated with a Member’s Required Deposit being insufficient to cover projected liquidation losses to the Coverage Target by adjusting a Member’s Required Deposit towards the Coverage Target.</p>
		Margin Liquidity Deposit (MLA)		USD \$MM	93	0	341	<p>The Margin Liquidity Adjustment Charge (MLA), addresses the risk presented to the Clearing Corp when a Member’s portfolio contains large Net Unsettled Positions in the particular group of securities with a similar risk profile or in a particular asset type.</p>
		Blackout Period Exposure Adjustment		USD \$MM	24	N/A	N/A	<p>Blackout Period Exposure: Refers to the exposure to GSD and Reverse Repo participants of the potential overvaluation of MBS Collateral in GCF Repos during the Blackout Period. An adjustment to Clearing Fund Requirements (increase to Repo participants and decrease to Reverse Repo participants) is made based on MBS positions in Member’s GCF portfolios during the Blackout Period. The adjustment is based on the average realized pay-down rate transactions. The adjustment is made during the Blackout Period, the first 5 to 7 business days each month.</p>
		CME Cross Margin		USD \$MM	-12	N/A	N/A	<p>GSD has a cross-margining arrangement with the Chicago Mercantile Exchange. The amount represents the aggregate margin savings for common members who elect to participate in the cross-margining arrangement.</p>
		Margin Req. Differential (MRD)		USD \$MM	N/A	N/A	3,415	<p>The NSCC MRD is designed to address position-variability risk by estimating the shortfall of end-of-day VaR and mark-to-market compared with the next day’s intraday risk and the risk that the next margin call will not be satisfied.</p>
		Mark-to-Market (MtM)		USD \$MM	N/A	N/A	1,750	<p>As a cash market CCP, NSCC uses a continuous net system where securities within the settlement system are marked daily to the prior night’s closing price. Net portfolio debits per Member are collected as part of the Member’s Required Deposit; net portfolio credits are not included. Value also includes 'When Issues MtM'.</p> <p>In FICC, GSD and MBSD maintain a pass-through MtM process whereby it collects MTM debits from those Members with debits and passes those to the Members with MTM credits.</p>
		Special Charge		USD \$MM	889	157	1,101	<p>GSD includes: Back Test Charges, Intraday Supp. Fund Deposit, Minimum Deposit, and Special Charges</p> <p>MBSD includes: Back Test Charges, Intraday MTM Charges, Intraday VaR Charges, Adequate Assurance, and Special Charges</p> <p>NSCC includes: Back Test Charges, Adequate Assurance, and Intraday Mark-to-Market</p>
		Other Charges		USD \$MM	28	4	819	<p>GSD includes: Minimum Requirement Adjustments, Excess Capital Premium, and Falling Below Minimum Requirement</p> <p>MBSD includes: 6 Day Fails Interest, Excess Capital Premium, Falling Below Minimum Requirement, and Minimum Requirement Adjustments</p> <p>NSCC includes: Family Issued Securities, CNS Fails, Non-CNS Requirements, CF Premium, and Minimum Requirement Adjustments</p>
