

Important NoticeNational Securities Clearing Corporation

A #:	9544
P&S:	9117
Date:	January 31, 2025
То:	ALL MEMBERS AND LIMITED MEMBERS
Category:	MUTUAL FUND SERVICES
From:	WEALTH MANAGEMENT SERVICES – MUTUAL FUND SERVICES
Attention:	MANAGER MUTUAL FUNDS OPERATIONS, MANAGER DATA PROCESSING, MANAGER CASHIERS, MANAGER P&S DEPARTMENT
Subject:	MF Info Xchange Service Enhancements

Effective **April 4, 2025**, National Securities Clearing Corporation (NSCC) will implement additional enhancements and capabilities to **MF Info Xchange**.

As part of this release, NSCC will enhance MF Info Xchange as follows:

1) New "Mutual Fund to ETF Conversion" event notification

This notification will allow fund clients to communicate Mutual Fund to ETF conversions and all pertinent conversion details.

Note: Data elements and field requirements are included in the attached Appendix.

2) New "General Announcement" event notification

This enhancement further broadens the types of notifications that can be sent via MF Info Xchange allowing fund clients to communicate general announcements.

<u>Please note:</u> this notification type should not be used to communicate any events that have a corresponding template within MF Info Xchange (for example "Fund Merger"). However, if the announcement is a general notification that does not have a corresponding template within MF Info Xchange (for example, retirement plan contribution deadline extension), this new "General Announcement" template may be used to communicate the event details.

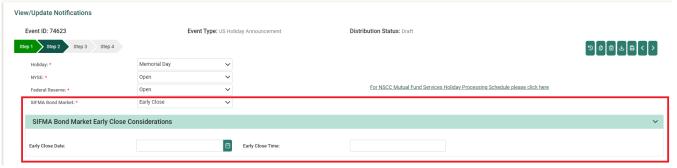

Note: Data elements and field requirements are included in the attached Appendix.

DTCC offers enhanced access to all important notices via a Web-based subscription service. The notification system leverages RSS Newsfeeds, providing significant benefits including real-time updates and customizable delivery. To learn more and to set up your own DTCC RSS alerts, visit http://www.dtcc.com/subscription_form.php.

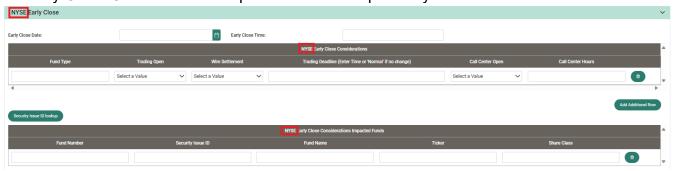

3) Enhancements to the "US Holiday Announcement" notification

In order to allow fund clients to communicate the details regarding the open status of a Bond Market, the following fields will be added to the existing "US Holiday Announcement" notification:

 A new required "SIFMA Bond Market" field will be added; clients must select one of the following options: Open / Closed / Early Close. If the "SIFMA Bond Market" field is set to "Early Close", the following Optional fields will be available to the clients to provide the early close information: "Early Close Date" and "Early Close Time".

 The Existing "Early Close Considerations" and "Early Close Considerations Impacted Funds" sections will be renamed to "NYSE Early Close Considerations" and "NYSE Early Close Considerations Impacted Funds" respectively.

Note: Data elements and field requirements are included in the attached Appendix.

- 4) Enhancements to the "Fund Merger" and "Fund Closure Liquidation" notifications
 - The following changes will be applied to both the "Fund Merger" and "Fund Closure Liquidation" event notifications:
 - "T+2 Settlement Date" section align with the industry transition to T+1

Web User Interface

The existing "T+2 Settlement Date" fields will be disabled.

Any existing notifications created prior to April 4, 2025 will contain the values in these fields if the values were populated prior to April 4, 2025. These fields will be disabled and will be blank on any new notifications starting April 4, 2025.

Excel

The existing "T+2 Settlement Date" fields will be present on all notifications created and distributed prior to April 4, 2025 and will contain the values provided in this section. For any new notifications starting April 4, 2025, this section will not be present in Excel.

<u>API</u>

The existing "T+2 Settlement Date" fields will remain part of the JSON schema and therefore will be returned as part of the "Fund Merger" and "Fund Closure – Liquidation" response payload. API updates to these notifications must contain the values that were present on these notifications prior to April 4, 2025. These fields will NOT be allowed on any new notifications starting April 4, 2025.

- A new Optional "Last Day ACATS will be accepted" field will be added to the "T+1 Settlement Date" section (within Web User Interface, Excel and API).
- A new Optional "LOI Completed" and "Front Load Sales Charge Waiver" fields will be added to the "Fees" section (within Web User Interface, Excel and API).

The following change will be applied to the "Fund Merger" event notification:

Web User Interface

The existing "Date NAV will revert to 2 decimal places" field will be disabled. Any existing notifications created prior to April 4, 2025 will contain the values in this field if the values were populated prior to April 4, 2025. This field will be disabled and will be blank on any new notifications starting April 4, 2025.

Excel

The existing "Date NAV will revert to 2 decimal places" field will be present on all notifications created and distributed prior to April 4, 2025 and will contain the values provided in this section. This field will not be present on any new notifications starting April 4, 2025.

API

The existing "Date NAV will revert to 2 decimal places" field will remain part of the JSON schema and therefore will be returned as part of the response payload. API updates to these notifications must contain the values that were present on these notifications prior to April 4, 2025.

This field will NOT be allowed on any new notifications starting April 4, 2025.

DTCC Non-Confidential

Note: Updates to the Data Dictionary are included in the attached Appendix.

5) Notification Search Screen Enhancements

These enhancements will further streamline the notification search process.

Download the current version of the received notification:

Current Functionality

In order to download and view a particular notification, notification receivers must follow a two-step process:

- Click on the Event ID within the Search Results table
- Click the link to download the notification

Enhanced Functionality

A new column will be added to the Search Results table on the "Search Latest Versions" screen allowing receivers to download the current version of the notification directly from the "Search Results" table.

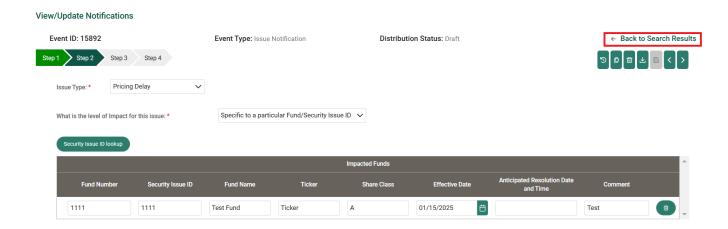

• Return to the Search Results table:

<u>Current Functionality</u>

In order to view all versions of a notification, clients must click on the Event ID and select the desired version. However, clients are not able to return to the search results and must open a new search screen, apply the search criteria and search again.

Enhanced Functionality

A new "Back to Search Results" button will be added to the Notification Details screen to allow notification submitters and receivers to return to the search results table, thus eliminating the need to repeat the search.

6) Enhancements to the API Query Notifications endpoints (Notification Receiver View)

In order to further streamline MF Info Xchange API functionality, JSON response payloads will be standardized as follows:

 Existing "Receive a list of notifications shared with the provided participant number" endpoint GET /client/{clientId}/received/notifications/search

The enhancement will impact "Price/Rate Error" and "Liquidity Fee Notification – Discretionary Fee" event types where multiple date fields are considered "effective date" for the purposes of the Web User Interface Search and Receiver Event Calendar. The returned list of events will NOT return the same Event ID multiple times (once per each "effective date"). Instead, the Event ID will be returned only once regardless of how many different "effective dates" are found within the notification.

Note: the "effectiveDate" will continue to appear on the returned search results for each found Event ID, however the field will be blank for "Price/Rate Error", "Liquidity Fee Notification – Discretionary Fee", "Dividend/Capital Gain Schedule" and "Interval/Tender Fund Transaction Schedule" notifications since these event types do not have an "effectiveDate" field. For example:

```
{
"distributionId": "1234",
"eventId": "1234567",
"eventType": "Liquidity Fee Notification – Discretionary Fee",
"notificationStatus": "Initial Notification",
"effectiveDate": "",
"clientNb": "00005119",
"companyName": "Fund Company A",
"receivedDate": "11/06/2024"
}
```

 Existing "Receive a list of notifications (shared with the provided participant number) that contain one or more of the specified Security Issue IDs" endpoint GET /client/{clientId}/received/notifications/securities

The modified JSON response will return one record per Event ID, regardless of how many Security Issue IDs were found within a given Event ID.

Note: the "effectiveDate" will continue to appear on the returned search results for each found Event ID, however the field will be blank for "Price/Rate Error", "Liquidity Fee Notification – Discretionary Fee", "Dividend/Capital Gain Schedule" and "Interval/Tender Fund Transaction Schedule" notifications since these event types do not have an "effectiveDate" field.

```
{
"distributionId": "1234",
"eventId": "1234567",
"eventType": "Price/Rate Error",
"notificationStatus": "Initial Notification",
"effectiveDate": "",
"clientNb": "00005119",
"companyName": "Fund Company A",
"receivedDate": "11/06/2024"
}
```

 Existing "Receive a list of notifications shared with the Participant Number(s) associated with the provided Ocode" endpoint GET /ocode/{ocode}/received/notifications

The modified JSON response will return one record per Event ID/receiving participant number combination, regardless of how many different "effective dates" are found within the notification.

Note: the "effectiveDate" will continue to appear on the returned search results for each found Event ID, however the field will be blank for "Price/Rate Error", "Liquidity Fee Notification – Discretionary Fee", "Dividend/Capital Gain Schedule" and "Interval/Tender Fund Transaction Schedule" notifications since these event types do not have an "effectiveDate" field. For example:

```
{
"distributionId": "1234",
"eventId": "1234567",
"eventType": "Liquidity Fee Notification – Discretionary Fee",
"notificationStatus": "Initial Notification",
"effectiveDate": "",
"clientNb": "00005119",
"companyName": "Fund Company A",
"receivedDate": "11/06/2024",
"recipientClientNb": "00000122"
```

```
"recipientName": "Broker Company 1"
},

{
"distributionId": "1234",
"eventId": "1234567",
"eventType": "Liquidity Fee Notification – Discretionary Fee",
"notificationStatus": "Initial Notification",
"effectiveDate": "",
"clientNb": "00005119",
"companyName": "Fund Company A",
"receivedDate": "11/06/2024",
"recipientClientNb": "00000123"
"recipientName": "Broker Company 2"
}
```

<u>PLEASE NOTE:</u> In order to perform code migration, MF Info Xchange will <u>not</u> be available in production on April 3, 2025, between 8pm-10pm ET.

TESTING

Effective March 21, 2025, clients can begin testing in the Participant Services Environment (PSE).

Clients are strongly encouraged to test and must contact their Relationship Manager before testing begins if access to PSE has not been previously established.

DOCUMENTATION

Updated documentation will be available on the DTCC Learning website on or about March 7, 2025.

The API schemas will be available in the DTCC Marketplace on January 31, 2025 (PSE Marketplace) and February 7, 2025 (Production Marketplace).

Clients can find more information on MF Info Xchange at http://www.dtcc.com/wealth-management-services/mutual-fund-services/mf-info-xchange
