## **TEST CUSIPS FOR T+1 INDUSTRY TESTING**

AUGUST 24, 2023

## TEST CUSIPS FOR T+1 INDUSTRY TESTING

The Depository Trust & Clearing Corporation (DTCC) published the T+1 Detailed Testing document, which included a list of test scenarios that Industry Members can use to test the various functional changes related to the Industry's move to T+1. To facilitate Industry testing, DTCC has identified test CUSIPs ("T+1 test CUSIPs") that Industry Members can use to test the various test scenarios. This includes unique test CUSIPs specifically identified for T+1 Corporate Action test scenarios. The T+1 test CUSIPs that were selected contain the specific parameters needed to test each individual test scenario identified in the testing document.

In addition to the T+1 test CUSIPs, which will be monitored and controlled as part of the T+1 test, most DTCC eligible production CUSIPs will also be eligible in the DTCC test environment. Members can conduct T+1 testing using the designated T+1 test CUSIPs or can do their own free form testing in other CUSIPs available in the test environment. As noted, the non-T+1 test CUSIPs eligible in the DTCC test environment will not be monitored and controlled as part of the T+1 test.

For exchange activity, Members will be able to submit test trades to them for execution. Executed trades will be submitted to NSCC for clearance and ultimately to DTC for settlement. As an alternative to generating test trades via the participating exchanges, DTCC has established a Transaction Management Tool for Members to use which will include the functionality to upload test trades directly in NSCC's Universal Trade Capture system (UTC) for processing (see the T+1 Detailed Testing document for more details).

All T+1 test CUSIPs are existing DTCC-eligible production CUSIPs (no dummy CUSIPs) with the exception of two dummy CUSIPs needed to support "When-Issue" (WI) trading. Since it is unlikely that there will be production WI CUSIPs to be copied over into the test environment to support WI trading, DTCC has established a dummy WI Municipal Bond and Equity CUSIP to ensure Members have a WI CUSIP for testing throughout the T+1 industry testing period.

DTCC has categorized T+1 test CUSIPs by the various DTC product types (sub-issue types) that are in scope for T+1.

DTCC will publish any additions or updates to the existing list of T+1 test CUSIPs on the UST1.ORG website, as an addendum to this document.

T+1 test CUSIPs within each sub-issue type are further categorized by the following criteria:

- CNS eligibility:
  - CNS eligible CUSIPs
  - Non-CNS eligible CUSIPs, which are further identified as Multilaterally or Bilaterally
     Netted Balance Orders or Trade-for-Trade Balance Orders
- Security Positions in DTC:
  - CUSIPs with position in DTC to enable Members to test scenarios through to

- settlement ("Made"). To support these test scenarios, DTC will automatically establish position in these CUSIPs in the Test environment for all DTC Members and reset the positions at the beginning of each test cycle (see List of CUSIPs for T+1 testing for the number of shares per test CUSIP below).
- CUSIPs without position in DTC to enable Members to test fail scenarios; DTC will automatically delete any security positions in these CUSIPs in the test environment for all DTC Members and reset the position to zero at the beginning of each test cycle (see the T+1 Detailed Testing for more details).

As stated in the T+1 Detailed Testing Framework document, specific T+1 test CUSIPs are not required to conduct the following test scenarios:

- Testing T+1 functional changes to the ETF Create/Redeem process. ETF agents will perform this test by selecting create/redeem eligible CUSIPs for which they are the agent.
- Testing options exercise and assignment. OCC will utilize production data as of the Monday prior to the options Expiration Date within the identified testing period (see the T+1 Detailed Testing document for more details).
- Testing changes to the standard settlement cycle of Fund/SERV securities. Fund/SERV clients have existing capabilities to test any change to the standard settlement cycle; no new testing functionality is needed to support T+1 testing.

Members should submit any questions or comments related to the T+1 test CUSIPs to UST1@dtcc.com

## TEST CUSIPS FOR T+1 CORPORATE ACTION TESTING

DTCC has identified the following unique CUSIPs for T+1 Corporate Action testing. These CUSIPs represent various product types (DTC sub-issue types) most frequently associated with Corporate Action events.

As part of each T+1 testing cycle, DTCC will establish Corporate Action test events in the PSE U environment utilizing the below listed test CUSIPs. Members will be able to test the full corporate action lifecycle of these test events (i.e., from announcement of a Corporate Action test event to allocation of proceeds) within each two-week testing period. DTCC will announce the list of events with their respective CUSIPs, via <a href="UST1.ORG">UST1.ORG</a>, no later than one week prior to the start of each testing cycle.

Corporate Action test events will include events that closely mirror the testing scenarios identified and described in the <u>T+1 Detailed Testing document</u>, and events that although not impacted by the move to a T+1 Settlement Cycle, will assist Members in performing regression testing on their respective systems.

It is important to note that a particular test CUSIP may have a different event type announced and processed in each T+1 testing cycle. For example, a CUSIP may be announced and processed as a Stock Split during testing cycle one and the same CUSIP may be announced and processed as a Tender Offer during test cycle two. Different disbursed CUSIPs and Contra (user) CUSIPs may also be used for similar events announced and processed in previous cycles.

DTC will establish security positions (10,000 – 100,000 securities depending on the security type) in each of the Corporate Action test CUSIPs for all DTC Members at the beginning of each T+1 test cycle/PSE U environment reset. However, Members will still be able to view a history of completed Corporate Action scenarios from previous test cycles via CA Web, PTS or PBS.

It is important to note that the CA CUSIPs (including disbursed and contra securities) are subject to change without notice and that firms should always refer to the CA Test Scenarios for each cycle that will be available on UST1.org.

Members should submit any questions or comments related to the T+1 test CUSIPs to ust1@dtcc.com
