

DTCC'S ENERGY POLICY

As an occupier of office space throughout the world, DTCC desires to participate in the reduction of energy use/consumption along with protecting & preserving the environment. The culture and policy of DTCC's Energy & Environmental Management System is built directly on our name. The corporate leadership, site management & employees at DTCC are:

Dedicated to engaging and participating in the ISO 50001 & 14001 Energy & Environmental Management System activities with the goal of reducing energy use/consumption along with protecting & preserving the environment.

Trustworthy to make information and resources available to achieve objectives and energy targets. Our goal is to reduce energy use/consumption and prevent/minimize pollution.

Committed to buying & using energy efficient products, resources and services in the most efficient, sustainable, re-usable, and environmentally responsible way. Our design of new, modified and renovated facilities, equipment, systems and energy-using processes consider energy performance improvement.

Continually improve our energy performance, environment protection, and overall Energy & Environmental Management System while satisfying all applicable legal requirements and compliance obligations related to energy use & consumption and environmental protection & preservation.

We encourage all DTCC employees to participate in the achievement of this policy by providing feedback and/or suggesting potential improvement opportunities to any member of their facility's Energy Management Team.

Thank you for your support,

SUSAN COSGROVE
